

High Value Tools for WoodWorkers

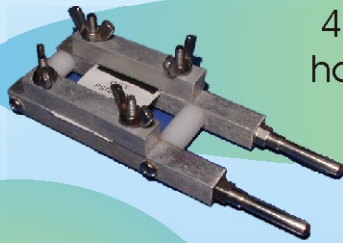

Handheld climate and wood moisture meters

based on CETsense technology

Wood Multi Meter - WMM03

Advanced wood moisture and climate meter

The First portable meter that allows you to check full measurements of the drying kiln*

4mm sockets for external wood electrodes, hammer, PST032** strip mounting hardware or K-Adapter accessory

Replaceable pins for moisture measurements on thin wooden boards or superficial measures.

Green backlight

Socket for DigiProbe electronic climate probe and PC connection

Ergonomic design, elastomer grips on closure's side

Kiln's temperature sensor input

Measures:

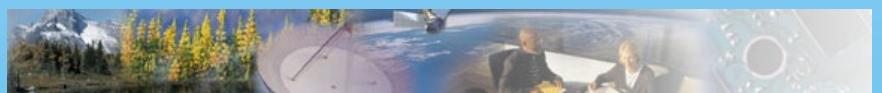

- Full range wood moisture (0% - 200%) with linear wood group compensation.
- Climate (EMC, Temperature, Relative Humidity) by electronic probe.
- Climate (EMC, Temperature, Relative Humidity) by PST032** strip and kiln's temp. sensors.

Other features:

- Selectable Celsius or Fahrenheit degrees for temperature.
- External temperature calibration capability.
- Powered by two low cost alkaline AA batteries.
- Battery voltage reading.
- Internal temperature sensor.

* Kilns using KMU measurement system.

**We recommend using PST032 strips rather than classical cellulose strips. Learn more from *RelativeHumidity04-091* datasheet.

Easy Meter - Easy03

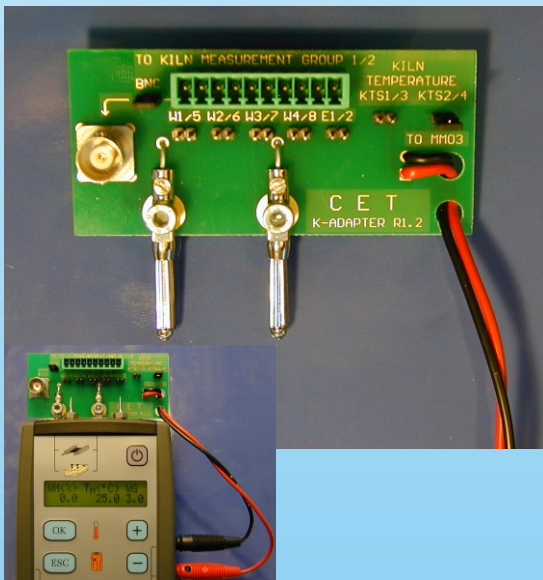

Easy to use, reliable wood moisture meter

Same technology of WMM03 but with functions limited to wood moisture content measurements. Features full range of 0% - 200%.

Other features:

- Selectable Celsius or Fahrenheit degrees for temperature compensation.
- Battery voltage reading.
- Backlight.
- Powered by two low cost alkaline AA batteries.

Accessories

K-Adapter Full drying kiln's measurements check

An useful accessory for fast and accurate diagnoses of all drying kiln's measures: EMC, temperature and wood moisture content.

The upper green socket is compatible with KMU's one (Kiln Measurement Unit). Simply unplug sensors' connector from KMU and plug it in K-Adapter to immediately check measures' correctness.

Using with:

- WoodMultiMeter for all measurement check.
- Easymeter just for wood moisture content check.

DigiProbe Digital climate probe

Precise and fast electronic probe for climate (temperature, relative humidity and EMC) measurements. Washable with distilled water.

Using with:

- WoodMultiMeter

Wood moisture and climate measurements KITS

Kit-Professional

Kit for professional man wanting to measure wood moisture and climate (T, RH, EMC).

- N.1 WoodMultiMeter
- N.1 DigiProbe
- N.1 DINExtensionCable
- N.1 Inox-Hammer
- N.1 Hammer-cable
- N.6 TopNail
- N.6 FrontNail
- N.1 TravelBag

Kit-Wood

Kit for measuring wood moisture content.

- N.1 EasyMeter
- N.1 Inox-Hammer
- N.1 Hammer-cable
- N.6 TopNail
- N.6 FrontNail
- N.1 TravelBag

Inox Hammer

Professional stainless steel hammer with exclusive graduate reference for deep measures.
